FOR IMMEDIATE RELEASE

Integrated Manufacturing Intelligence: MSP4MFG and JobShopOS Power the Secure Smart Shop Floor at IMTS 2026

Strategic collaboration unites OT cybersecurity with AI-driven production intelligence, live at Booth #133326

IMTS 2026 | September 14–20, 2026 | McCormick Place, Chicago | Booth #133326

CHICAGO, IL – September 14, 2026 – Manufacturers today face two critical challenges: increasing cyber threats targeting operational technology (OT) environments, and growing pressure to improve production efficiency. MSP4MFG — the joint go-to-market partnership between Excellerant and OBETEC — and JobShopOS, enhanced by Planify's AI-driven planning capabilities, are addressing both challenges through a strategic collaboration, creating a secure and intelligent manufacturing ecosystem for the modern factory floor.

MSP4MFG delivers specialized OT cybersecurity services designed specifically for industrial environments. Unlike traditional IT-focused providers, MSP4MFG secures the systems that drive production, including CNC machines, PLCs, SCADA systems, HMIs, and additive manufacturing equipment. OBETEC contributes compliance and risk management expertise, while Excellerant contributes a real-time machine monitoring platform that captures live production and machine data — together giving MSP4MFG the ability to deliver secure connectivity, network segmentation, continuous monitoring, threat detection, and operational resilience for the modern factory.

JobShopOS complements this foundation with advanced production intelligence. Built around a powerful finite scheduling engine and enhanced with AI-driven planning capabilities from Planify, JobShopOS ingests the real-time machine and production data captured by Excellerant's monitoring platform and transforms it into actionable insights. Manufacturers gain dynamic scheduling, improved resource utilization, bottleneck visibility, and faster decision-making that improves throughput and on-time delivery performance.

Together, the integrated solution creates a closed-loop system where trusted machine data is both protected and optimized. MSP4MFG safeguards the critical OT infrastructure, while JobShopOS leverages that data to drive measurable operational improvements. **Attendees can see the integrated MSP4MFG–JobShopOS solution live at Booth #133326, September 14–20 at McCormick Place in Chicago.**

About MSP4MFG

MSP4MFG is a partnership between Excellerant and OBETEC that unites manufacturing intelligence and OT cybersecurity into a single, coordinated service. Excellerant brings machine connectivity, production monitoring, and OEE expertise; OBETEC brings cybersecurity, compliance, risk management, and operational resilience for critical infrastructure. Together, MSP4MFG helps manufacturers discover, assess, protect, monitor, and improve their IT, OT, IoT, and physical security posture through one unified partner.

About JobShopOS

JobShopOS is a production intelligence platform built around a finite scheduling engine, giving manufacturers real-time visibility into shop floor operations. Enhanced with AI-driven planning capabilities from Planify, JobShopOS helps job shops and manufacturers improve resource utilization, reduce bottlenecks, and make faster, data-informed scheduling decisions.
